Who holds the keys

A key is whatever opens an account: a password, an administrator login, a recovery code. Fill in each row as it stands today.

ARASAKA SOFTWARE

What	Where it is today	Whose name the account is in	Who has the password or key	Who could open it if you could not	When anyone last tried to recover it
Mail					
Documents					
Photos					
Passwords					
Calendar and contacts					
The domain (the name after the @)					
Backup copies					

– How many rows say Google, Microsoft or Apple?
– How many say “nobody” in the second-to-last column?
– How many different people does it take to open everything?

If you would rather every row said the same thing – one machine that runs for you alone, your own passwords and keys, one person who answers for it – write to me:
